## Professional Summary

Lead Software Engineer with 9+ years of experience designing scalable backend systems and microservices. Proven expertise in Java, Ruby on Rails, and Ember.js, with a strong track record of driving system design initiatives, delivering roadmaps, and mentoring engineering teams. Experienced in owning the product development lifecycle as a Technical Lead, driving technical decisions, leading cross-functional squads of 12+, and aligning engineering direction with product strategy. Adopted AI-assisted development using Cursor & Claude to accelerate delivery with engineering quality.

## Core Competencies

Microservices & Event-Driven Architecture  
System Design  
Data Structures and Algorithms  
Problem Solving

Technical Roadmap  
API Design & Contracts  
Cross-functional Collaboration  
Technical Mentorship

## Professional Experience

**Freshworks India | Aug 2019 – Present**

### Lead Software Engineer

- Designed and developed a product feature allowing agents to customise the left navigation bar in Freshservice on the go.
- Architected a centralized time-tracking service using microservices design shared across multiple Freshservice modules, reducing redundant implementations across 3 teams and cutting integration time by 40%.
- Defined API contracts, integration strategy, and scalability guidelines, ensuring zero breaking changes post-launch across product and platform squads.
- Authored technical architecture documents and presented system design proposals to engineering leadership, gaining company-wide alignment on platform standards across 2 product teams.
- Established security best practices and CI/CD pipelines using GitHub Actions, Jenkins, and SonarQube, adopted as the engineering baseline across 3 squads with 100% code coverage - later rolled out as the company-wide engineering standard.
- Modeled CPU and memory capacity for API servers, background workers, and Kafka consumers, ensuring right-sized production infrastructure.
- Adopted Cursor and Claude as daily development tools, applying prompt engineering for code generation, test scaffolding, and technical documentation.
- Designed hiring assessments, conducted 20 technical interviews, and built evaluation rubrics used consistently across backend hiring panels.

## Senior Software Engineer (Full Stack)

- Drove end-to-end delivery of 4 core ITSM modules (Ticket, Change, Problem, Release) - migrating to Ember.js frontend with a RESTful Ruby backend, reducing average page load time by 20% and resolving UX issues raised by enterprise customers.
- Generalized the Formserv engine into a shared, module-agnostic framework used across 6 product modules, reducing per-module development time by 30% and earning a Spot Award.
- Served as Squad Lead for a team of 12 engineers, owning sprint planning, backlog grooming, and retrospectives while contributing hands-on as an individual contributor.

## Software Engineer

- Developed 3rd party integrations with Jira, Jamf, and Chrome OS in the Freshservice marketplace, enabling cross-platform workflow management for 500+ customers.
- Joined customer-facing calls to diagnose integration failures and delivered engineering fixes that reduced the escalation rate by 18%.

Verizon India | Jun 2017 – Aug 2019

## Member of Technical Staff

- Led the IBM Integration Bus deprecation initiative, migrating legacy middleware to open-source Java-based alternatives and delivering \$9M in annual licensing savings.
- Rebuilt the MTAS platform from C++ to Java-based services, improving the build and deployment cycle time significantly.
- Built the Iconic Dashboard and Healthcheck observability tools, giving on-call engineers real-time system visibility and reducing the mean time to detect by 50%.

## Technical Skills

|            |                                                                        |
|------------|------------------------------------------------------------------------|
| Frameworks | Ruby on Rails, Ember.js, Spring Boot, Test-driven development, AI SDLC |
| Databases  | MySQL, Oracle                                                          |
| DevOps     | Docker, CI/CD, Jenkins, GitHub Actions, SonarQube                      |
| Infra      | Apache Kafka, Redis, Memcache                                          |

## Recognitions and Awards

- Led the **IBM Integration Bus deprecation**, delivering \$9M in annual licensing savings at the organizational level.
- **Squad and Spot Awards** - Freshworks: recognized for backend API modernization, full-stack Ember.js migration, and consistent delivery excellence.
- **Spot Award** - Formserv Generalization: commended for building a reusable form engine that accelerated feature delivery across 6 product modules.
- **CI/CD Standards Adoption**: GitHub Actions pipelines introduced at the squad level were later adopted as a product-wide baseline across multiple engineering themes.

## Education

BE (CSE) Sri Krishna College of Engineering and Technology, 2017 - **Grade:** 90.70%
